

Effective immediately, medical disposal services with the MO P2D2 box at this location has been suspended until mid-May. We will re-evaluate at that time based on the current status with the coronavirus to determine when we can resume services.

If immediate medication disposal is needed, please follow the steps below.

To dispose of unwanted medicines at home:

1. Add water to the medicine container to dissolve the tablets or dilute the liquid. Not all medicines will dissolve. Keep out of reach of children and pets while dissolving!
2. Empty medicine & water from its container into a disposable & sealable bag.
3. Mix in a handful of “gross” solid substance such as kitty litter, coffee grounds, or dirt. You can add cayenne pepper to the mix as well to further discourage animals or people from getting into the mixture.
4. Remove & destroy ALL identifying personal information from the prescription label of the original medicine container.
5. Place bag in trash on trash pick-up day. Recycle plastic or glass container.
